

# Exercises in HTML parsing

Anna Lewczuk & Przemysław Kurek

## Exercise 1

- Write a bot, that will log into a Campuswire, and will send itself (its .py file, not it's code) to your tutor.
- *Hint:* You probably want to test it before - by sending direct messages to yourself :)

## Submissions

- Create a file named "ex\_1.py", which will contain your bot.
- **Do not store your emails and passwords in this code.** Gather them the same way, as it was suggested at classes.
- This file must contain full program, which without errors can be evaluated by `python3` interpreter (test it in command line).
- Run it once in order to make it send itself to your tutor at Campuswire.
- Additionally, commit this file to your Github Classroom repository into "07" folder.
- The deadline is: nearest Sunday, 23:59.
- You can try using Jupyter Notebook.
